DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: The prior art fails to disclose an apparatus for controllably generating sparks having, inter alia, at least two output stages connected to a spark generating device, means for charging the energy storage devices and at least partially isolating the energy storage device of each output stage from the energy storage devices of the other output stages and a logic circuit connected to the controlled switches of the at least two output stages for selectively triggering the output stages to transfer their stored energy to the spark generating device to generate a spark, as recited in the independent claim, so that the energy level and the profile over time of an energy pulse used to generate sparks at the spark generating device can be electronically adjusted to suit any given application. Thus, the examiner has allowed claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ayers, Patent No. 3,611,103, "Capacitor charging and discharging control system".

Harris, Patent No. 3,891,917, "Capacitor discharge ignition testing apparatus".

Art Unit: 2821

None of the above patents discloses the recited arrangement of the at least two output stages, the charging and isolating means and the logic circuit.
